County. The Company will continue operations employing the
following mining and reclamation techniques:

During Operations:

This is an existing salt evaporation operation previously
owned by North American Salt Company. Salt is
scrapped from the solar evaporative ponds using a har-
vester. The salt is conveyed into a trailer towed behind
the harvester. The salt is hauled to the wash plant where
it is washed using lake water. The salt is conveyed to a
double-wing stacker and stockpiled for storage. Salt is
conveyed to the mill by front end loader and conveyor.
In the mill, the salt is dried, graded and bagged, or
processed into one of several product lines.

After Operations:

All processing facilities, buildings/structures will be de-
molished and the debris removed from the site. Areas
in and around the man processing facilities will be
backfilled and graded as needed. Areas will be
ripped and turned after the structures are removed.
These areas will be seeded using a seedmix recom-
mended by the Division. Dikes in the crystallizer will be
smoothed down. There will be some grading of materi-
al back into the canals. Any residual stockpiled materi-
als will be removed and sold. The remaining canals will
be left to erode naturally. Solar ponds and crystallizers
will not receive revegetation treatments. The road to
Stansbury Island will not be affected by reclamation.
The outer dike will remain for flood control if so desired
by the County or State at the time of reclamation.

The person representing the company is Mr. Gary C. Price,
